AGENDA REVISION NOTICE
FOR JULY 10, 2018
(DISTRIBUTED AT 12:30 P.M. ON JULY 9, 2018)

THE FOLLOWING ITEM HAS BEEN ADDED TO FINANCE AND ADMINISTRATIVE SERVICES COMMITTEE:

COMMITTEE DISCUSSION

1. Update on the recent raspberry price crash and its impact on local farmers, followed by discussion of ideas for how Whatcom County government can provide support to local farmers (AB2018-213)
TITLE OF DOCUMENT:
Update on raspberry price crash and its impact on local farmers

Machine harvesting of raspberries is a common scene in north Whatcom County each July. (File photo)

*Big buyer pulls out, then relents a bit, showing marks of difficulties of competitive fruit market*

WHATCOM — Raspberry farmers knew it was a possibility.
“It’s not like we didn’t see the trend coming,” said Henry Bierlink, executive director of the Lynden-based Washington Red Raspberry Commission. “But the idea that someone would pull the plug right before harvest, though, is a real strike in the gut.”

It did happen at the last minute, however, Bierlink said, just as the big commercial raspberry harvest of Whatcom County was beginning this week.

SVZ, a producer and supplier of fruit and vegetable ingredients and a large buyer of local processed raspberries, notified local raspberry processors that it would not be purchasing any new berries this year. Added to this are Kerr Concentrates and TreeHouse Foods, other companies that vocalized they would not buy local berries in the amounts they have in the past.

“It affects everyone,” Bierlink said. “Some more than others depending on how they have farms set up.”

But by Thursday, SVZ agreed to return to the local market. The pullout sent local farmers into a panic.

Now, some immediate relief is given, but not mitigating long-term market flaws, Bierlink said.

SVZ will only purchase the equivalent to 30 percent of last year’s total raspberry crop. Quantity contracts have been sent out to local farmers to sign in agreement of these terms.

For those who grow higher-quality raspberries, to be sold fresh or processed Individual Quick Frozen (IQF), the SVZ pullout wouldn’t have as much of an impact. But for farms that rely mostly on selling their fruit in 55-gallon drums to be processed for juice concentrate and other food products, the action is a huge blow.

“People were counting on a customer that didn’t materialize,” Bierlink said. “It’s pretty tough after spending all that time getting berries ready and finding out there’s no place for them to go.”
It was to be the first day of harvest at Shokar Farms at 6069 Neveel Rd. east of Ferndale. Growers were raring to go. Over $20,000 had been spent on fertilizer, sprays and inspections in preparing this year’s crop. The Shokars have packed their fruit straight into drums for about ten years.

Shokar Farms, a family-run operation, reached out to a local raspberry processor at noon on Monday, June 18, co-owner Shawn Shokar said. Everything seemed to be in the clear — the processor was going to accept fruit then. But a call came three hours later with grim news. They would no longer be accepting raspberries meant to be processed for concentrate.

“We called everywhere,” Shokar said, referring to attempts made to find someone to purchase their fruit of the 2018 raspberry harvest in barrels. “There’s too much stock from last year.”

A variety of different entities pack raspberries in the county. Most pack just what they grow, Bierlink said. Others buy fruit from other farmers. “The ones that do buy, what they’re telling us is that they can’t even sell what they have, much less buy more,” Bierlink said.

Anonymous raspberry processor sources say the move by the mostly European-based SVZ company — but also with a U.S. office in Othello, Washington — could have been an attempt to bargain for a lower raspberry price. But raspberry prices have already been on a downturn in the last three years.

More countries saw potential in growing raspberries, Bierlink said. He attributes emerging fruit competition, predominately from Mexico, as a cause of the lower prices.

“We can’t compete on price,” Bierlink said. “We can compete with quality, but if people want to buy on price, we’re at a disadvantage. It’s up to customers to decide what they want to do.”

Fruit imports into the U.S. have risen steadily over the last 18 years, according to data supplied by the U.S. Department of Agriculture. More than half of fresh fruit sold in the country’s grocery stores is grown offshore.
Bierlink said that labor laws in the country play a role too. “Everyone wants to pay people good rates. But we can’t pay $15-$20 an hour to pick and Mexico pays $5 a day. It makes an uneven field for competing.”

Shokar is willing to fight for a solution. He has reached out to county and government agencies. “They’re trying to do something,” he said.

And he is not alone in the fight. Farmers have been sharing their worries with each other and the state raspberry commission office in Lynden has been working on various related projects to try to create better berry markets and avoid the price downfall.

“We keep doing other things, looking for opportunities,” Bierlink said. “But we don’t have any magic wands here. This is the market.”

Farmers will now have to weigh their options — attempt to find alternative buyers of fruit, pull out plantings altogether or hope next year will be better. Picking into flats for a mid-quality grade remains a choice, but Bierlink admits “even that’s pretty limited.” “It’s hard to see how we’re going to sell berries profitably this year,” Bierlink said.

Shokar mulled over a decision to run over his 14 acres of raspberry plants with a tractor on Wednesday, prior to SVZ announcing that they would buy a portion of local fruit. “There’s nothing else to do with it,” Shokar said. “We’re basically not going to make any profit this year.” He added that the county may lose a lot of farmers who put “so much money into their crop.”

Manjeet Gill, of Gill’s Berry Farm of Lynden, has been a leader in negotiations for local farmers trying to sell their raspberries. His family has been farming solely raspberries for the last 16 years. This year he plans to remove all but one field of the fruit crop — in order to maintain value on his land.

He started the switch in farm produce to blueberries in May, when he planted 12 acres. Gill said he plans to add an additional 16 acres in the next few years. And others, he said, are planning to follow suit by removing their raspberry fields too.
“It’s all part of a bigger picture,” Bierlink said. “If you can’t sell berries, it doesn’t make much sense to grow and pick them.”
